Understanding the “French paradox”

How is it possible that people in France who regularly eat rich, sauce-laden foods have such a low rate of cardiovascular disease? Scientists have found that the explanation for the “French paradox” is that most of those heavy meals are accompanied by a glass or two of red wine which includes a substance that protects against clogged arteries.

The isolation of resveratrol as the molecule responsible for the protective benefits of red wine is a major breakthrough in anti-aging medicine. This important antioxidant is a point-of-difference addition to Immunotec’s vitamin and mineral formulation.

Vitamin and Mineral Supplement

with Resveratrol

Dietary Supplement

Complete Vitamin and Mineral
Supplementation towards
maintenance of good health

Certified free of contaminants

Adding resveratrol to your vitamin and mineral supplement makes sense

Although the idea of drinking a glass of red wine each day to increase resveratrol levels may sound tempting to those who enjoy wine, increasing wine consumption in general is not recommended. Many of us are already accustomed to taking a vitamin and mineral supplement to help provide missing nutrients in a less-than-perfect diet. Getting resveratrol at the same time is an important addition!

The sunshine vitamin goes under the microscope!

For many years, dangerous pollutants emitted by industry have been blamed for much higher cancer rates in rich northern countries compared with those in developing countries. Now, scientists wonder if the real cause isn't a vitamin D deficiency that is less problematic in poor nations. Recent research has suggested that an important factor to consider is most likely a lack of vitamin D.

The main way humans achieve healthy levels of vitamin D isn't through diet but through exposure to the sun. But here's the catch: health authorities have stressed avoidance of direct sunshine to avoid the risk of skin cancer. Furthermore, most North Americans, living at northern latitudes, aren't exposed to sunshine strong enough to make vitamin D. A changing demographic also affects vitamin D levels; unlike previous generations who made their living by working outside, most people now spend most of their time indoors.

The 400 IU dosage included in most multivitamins is considered too low to be totally effective. That's why Immunotec formulators included 800 IU in each two-capsule serving of its **Vitamin and Mineral Supplement with Resveratrol**.

Immunotec's **Vitamin and Mineral Supplement with Resveratrol** is a complete formulation that contains 21 vitamins, minerals and nutrients, and is certified free of heavy metals. Vitamins, minerals and nutrients included in the formulation support a multitude of health benefits:

Vitamin A

Helps to maintain eyesight, skin, membranes, and immune function; helps in the development and maintenance of bones and teeth.

Vitamin C

Plays a role in the normal development and maintenance of bones, cartilage, teeth and gums, and in wound healing.

Vitamin D

Helps in the normal development and maintenance of bones and teeth; helps in the absorption and use of calcium and phosphorus.

Vitamin B1

Helps the body to metabolize carbohydrates.

Vitamin B2, B3, B5, B6

Help in tissue formation, and help the body to metabolize proteins, fats, and carbohydrates.

Vitamin B12

Helps to produce red blood cells.

Vitamin B9 (Folate)

Helps prevent neural tube defects when taken prior to becoming pregnant.

Selenium

Factor in the maintenance of healthy body cells and tissues; acts as an antioxidant for the maintenance of good health.

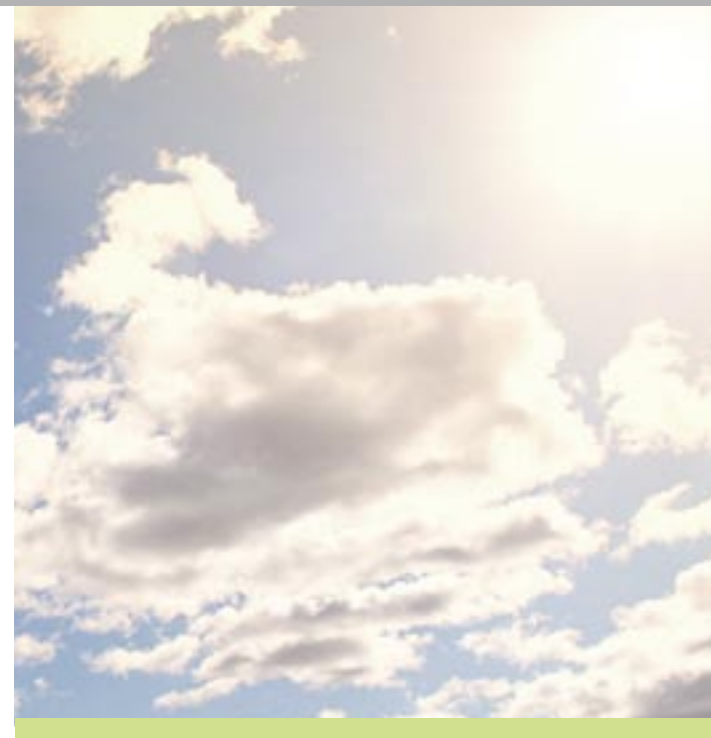

Copper

Helps to produce red blood cells and connective tissue.

Choline

Provides important benefits for the structure and function of cells.

Immunotec's **Vitamin and Mineral Supplement with Resveratrol** also includes **Vitamin E, Biotin, Zinc, Chromium, Manganese, Inositol, and Chlorella** for the maintenance of good health. Scientific experts excluded two ingredients from this complete formulation: calcium, since it is not usually included in appropriate doses and should be taken as a stand-alone supplement; and iron, which can cause health concerns in some individuals and should be used on an as-needed basis.

Naturally-sourced micronutrients make a “supercharged” supplement

One of the oldest life-forms on our planet is chlorella, a form of microscopic algae – one of the first organisms to use chlorophyll to convert sunlight into energy. Chlorella is included in the formulation of Immunotec's **Vitamin and Mineral Supplement with Resveratrol** because it provides a natural source of an incredible array of nutrients: proteins, essential amino acids, carbohydrates, vitamins, macrominerals, trace elements, and phytochemicals. Chlorella is such an incredible source of nutrients, it has been nicknamed a “superfood.”

Take two capsules of Immunotec's Vitamin and Mineral Supplement with Resveratrol every morning as a “toast” to your good health!
